Summary

Full-Stack Developer with experience building web applications using React, Next.js, Node.js, and MongoDB. Developed a real-time collaborative classroom platform using WebSockets, an analytics-driven hospital management portal, and containerized applications with automated CI/CD pipelines. Focused on writing clean code, designing database schemas, and setting up deployment workflows.

Education

University of Peshawar

Peshawar, Pakistan

Bachelor of Science in Computer Science

2022 -- 2026

- **HEC National Skills Competency Test (NSCT):** Secured the **95th percentile** nationwide in the IT competency assessment organized by HEC, PSEB, and P@SHA (April 2026).
- **Relevant Coursework:** Data Structures, Algorithms, OOP, Database Systems, Software Engineering, Computer Networks

Experience

Freelance Full-Stack Developer

Self-Employed

2025 -- Present

- Developed and hosted 3 full-stack MERN applications (a Complaint Management System, a blogging portal, and a personal finance ledger) managing database schema design and hosting.
- Engineered a complaint ticketing pipeline with Cloudinary image uploads, priority levels (Low to Critical), and automated status updates via Nodemailer.
- Designed schemas in MongoDB to track user profiles, publishing history, and income/expense ledgers with JWT authentication.

Projects

Collaborative Study Platform | *React, Node.js, Socket.io, Gemini & Groq APIs, MongoDB, Firebase*

- Built a real-time classroom platform using Socket.io to synchronize slide presentations, user lists, and chat rooms across connected clients.
- Integrated Groq (Llama 3) and Gemini APIs, writing fallback logic that switches providers when API limits are reached.
- Added audio narration using Edge TTS to convert slide text into audio streams for students.

Hospital Management System | *React, Node.js, Express, MongoDB, Mongoose, Tailwind CSS*

- Built a role-based portal supporting admin, doctor, and patient roles to manage appointment booking, approvals, and cancellations.
- Wrote aggregation queries in MongoDB to calculate daily and weekly clinic revenue estimates using consultation fees and appointment statuses.
- Designed database schemas to track doctor availability schedules, patient medical histories, and upcoming appointments.

DevOps-Enabled Blog Platform | *React, Node.js, Express, MongoDB, Docker, GitHub Actions, AWS EC2, Nginx*

- Containerized a React and Node.js application using Docker and Docker Compose, configuring an Nginx reverse proxy to route frontend and API traffic.
- Created a CI/CD pipeline with GitHub Actions that builds and pushes production Docker images on push events.
- Wrote deployment scripts using SCP and SSH actions to copy configuration files and run docker compose commands on an AWS EC2 instance.

E-Commerce Platform | *Next.js, TypeScript, Stripe API, MongoDB, Redux Toolkit, Tailwind CSS*

- Built a storefront using Next.js App Router and TypeScript, using Redux Toolkit for cart state management.
- Integrated Stripe Checkout and set up webhook endpoints to handle transaction callbacks and create order records in MongoDB.
- Wrote validation schemas using Zod and React Hook Form to validate checkout fields and login credentials.

Technical Skills

Languages: JavaScript, TypeScript, HTML5, CSS3, SQL

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS

Backend & DevOps: Node.js, Express.js, REST APIs, Socket.io, Docker, GitHub Actions, AWS EC2, Nginx

Databases: MongoDB, Mongoose ODM, Firebase

Tools & Services: Git, GitHub, Postman, Cloudinary, Stripe API, Gemini & Groq APIs
